

```

class Book:
    def __init__(self, title = None, author = None, price = 0):
        self.title = title
        self.author = author
        self.__price__ = price

    def get_price(self) -> int:
        return self.__price__

    def display_info(self) -> None:
        print("title: {:>3}".format(self.title))
        print("author: {:>3}".format(self.author))
        print("price: {:>3}".format(self.get_price()))

if __name__ == "__main__":
    capstone = Book(author="jise", title="Capstone Projik", price=123)
    capstone.display_info()

    print("\n\n")

    fictionko = Book("Hanataa", "JIJISI", 909090)
    fictionko.display_info()

```

OUTPUT:

```

title: Capstone Projik
author: jise
price: 123

title: Hanataa
author: JIJISI
price: 909090

```
